Joinery is the way timbers are held together to form a timber frame or post and be structure. Joinery can be traditional - made with mortises and tenons held together with wooden pegs, or steel connections can be used the bolt the timber together. It can be simple or complex. Simple post and beam frames may use half lapped connections, while timber frames will use a variety of mortises, tenons, dovetails and shoulders.

At Vermont Timber Works we still handcraft all of our frames using classic timber framing tools like framing chisels, mortising machines, beam saws, peg drills, slicks and more. While many other timber framers have started using automated equipment for fabrication, we have found that it is still better, and more accurate, to use hand tools.

Timber Framing is the use of posts and beams to support a structure. The posts and beams are fastened together with traditional wood joinery methods. Long Creek Timber Framers use oak, pine, or Douglas fir timbers. The posts and beams are exposed to the interior of the structure, a prominent feature of the interior design.

### **About - Long Creek Timber Framers**

In our Timber Framing, Cruck Framing and Scribing hands-on courses we actually build timber frames with all of the joinery one would find in a typical house. The projects are smaller, though, to guarantee that we will be able to go through the process from start-to-finish and give everyone a chance to try different joinery.
