At present, in designing large dam engineering earthquake resistance, the main parameter seismic motion peak ground acceleration used to characterize the dam-site seismic function strength is either determined in terms of the "China Earthquake Motion Parameter Zonation Map" or provided by the transcendental probability curves in the dam-site-specific seismic hazard evaluation, based on the achievements of seismic hazard evaluation by the probability method. The "China Earthquake Motion ...

Advanced GeoServices' experienced dam safety engineers have developed a unique and common sense approach to help dam owners manage the risk, cost, and aesthetics for their dams. This technical approach can include, as appropriate, the following activities: • Detailed hydrologic evaluation of the dam's watershed to determine a realistic spillway design flood.
