Exploring Feelings: Anxiety: Cognitive Behaviour Therapy ...

Cognitive behavioral therapy focuses on changing the automatic negative thoughts that can contribute to and worsen emotional difficulties, depression, and anxiety. These spontaneous negative thoughts have a detrimental influence on mood. Through CBT, these thoughts are identified, challenged, and replaced with more objective, realistic thoughts.

What Is Cognitive Behavioral Therapy (CBT)?

Anxiety can be debilitating for anyone, but it can be especially confusing for a child. Learning about emotions helps children recognize connections between thinking and feeling, and the physiological effects of anxiety on the body (sweating, increased heart rate, crying, etc.).
